

## **PRODUCT/PROJECT MANAGER**

National Digital Medical Archive, Inc. is headquartered in Berwyn, PA (Chesterbrook). We are a privately held company that specializes in the national and cross-enterprise distribution and access of health images and data. We provide storage and distribution solutions for health imaging centers and hospitals.

Opportunities abound in this rapidly growing, exciting company. Candidates should be driven and interested in career growth and have a passion for learning. NDMA only hires the best and most talented individuals, creating an excellent work environment of committed professionals.

We are seeking high-energy, devoted individuals with a minimum of 2-5 years of project management analysis experience. This person will perform analysis, provide recommendations, and implement changes to optimize our products. The responsibilities of this role will range from translating customer insights and partner needs into recommendations for product enhancements to financial opportunity sizing to hands-on management of product features. Recommendations must be founded in solid quantitative analysis, thus analytic and data-mining capabilities are essential. However, certain product features must be managed based on qualitative assessment of the user experience, thus ability to think through the user experience is also essential.

This position reports to the Sr. Director of Product Management at NDMA. The Product Management team is instrumental in shaping NDMA's overall product strategy, thereby giving this group significant exposure to senior management.

### Core Responsibilities:

- Develop consumer and product insights from sophisticated, data-driven analysis
- Recommend and implement product changes that optimize user experience
- Develop business cases for new functionality with supporting financial and economic analysis
- Develop business requirements and work with technical and business managers on allocating appropriate resources to implement process

Requirements:

- 3-5 years of experience; healthcare IT experience strongly preferred**
- Strong quantitative analysis, data-mining, and technical skills
- Proven success identifying opportunities from analysis and implementing solutions
- Experience / comfort working on cross-functional initiatives
- BA Degree required; PMP certification a plus!

A cover letter documenting how your experiences match the above responsibilities will significantly increase your chance of selection for an onsite interview.
